E-LEARNING SOLUTIONS...

dextus

E-LEARNING AND SKILLS TRAINING SOLUTION

Dextus is a web based e-Learning platform that provides an easy and intuitive way for self-paced learning, test taking, training management and human resources development. It provides an efficient means of disseminating knowledge and adapting to the changing needs of skill sets in a competitive environment and plays a major role in the development of your human resources.

Identifying the training needs and chalking out a training plan is just the first step towards developing your human resources – and all businesses have made this an important part of their process.

So what sets you apart and gives you the much-desired *edge* over your competition? It is the ability to differentiate from the rest of the pack with developing and deploying '*on-the-run*' e-Learning solutions to scale up the skill sets of your staff.

Dextus equips you with that ability. Unlike run-of-the-mill e-learning solutions that adopt the standard top-down training approach, Dextus addresses the training requirements of your organization in their totality. It gives you a 360°, interactive, knowledge-transfer platform for your managers, trainers, and the trainees – instead of the standard top-down training approach.

Dextus lets you upload course material in various desktop

file formats, like Word, Excel, Powerpoint, Flash, mp4, wmv, Youtube videos etc ...

Also upload files from Dropbox and Box

This cuts down on the time to develop course material that needs to be disseminated

TRAINING & REGULATORY COMPLIANCE

Dextus also helps you address the need for your organization to be compliant with various regulatory training courses (for e.g. corporate governance, sexual harassment etc.). Having documented and published your policies, you need to make sure that your personnel worldwide have understood them and are aware of the mandatory compliance requirements. Dextus helps ensure that everyone understands the contents and have certified their completion of these mandatory courses.

Design, Manage, Measure, and Evaluate

Design and Develop

Identify training needs

Managers can identify the training needs of their team, design, and develop the course methodology and upload the courses

Collate requests for training

Keep track of the requests for a course made by an employee through the Dextus platform and organize the required training.

Manage Training Process

Assign

Having identified the training needs and gathered the requests, managers can assign the courses to various members of the team.

Alerts

Alerts are sent out automatically to ensure that the training is conducted on time.

Measure and Evaluate

Measure employee growth

Assign and administer online tests for trainees.

Evaluate employee progress

Keep track of the trainees' progress through online scores.

Certify

Documented evidence of successful completion of the course by trainee is maintained. Award on-line certificate of successful completion of the training

Key Features of Dextus

- Design course structure and an on-line repository of courses
- Easily upload training material
- Supports multi modal file formats (.ppt, .doc, .xls, .pdf, .wmv, .flv, mpeg, mp4 etc.)
- Maintain question banks
- Conduct on-line tests
- Online notes Discussion forums
- Evaluate current skill level and potential training needs
- Manage training schedule
