
Conformus Enterprise Risk Management (ERM)

Conformus ERM from Stridus, is a world class software for Enterprise Risk Management and monitoring and serves as a common platform that deals with strategic, financial and operational risk. It is integrated with the Conformus GRC suite of products that manage policies and procedures, testing and internal audit functions.

Conformus ERM provides a closed loop, common framework for the entire enterprise to communicate and model risks using consistent terminology and metrics. Perform risk analyses by incorporating views of all stakeholders for potential risks (or opportunities) and their impact using the in-line survey and facilitated workshops.

React quicker by making informed decisions and spotting trends with the monitoring and actionable escalations of key risk indicators. Various graphs and charts as well as desktop gadgets provide pertinent information at the appropriate severity thresholds.

Key features:

- Consistent risk communication platform across the enterprise
- Modeling of objectives and potential strategies and their impacts
- Heat maps to provide guidance for risk assistance and permissible thresholds
- Have visibility to the risk responses and residual risks and their impacts
- Track loss events
- Monitor indicators that can come from various sources and correlate impact of indicators to risks
- Custom escalation and actions when thresholds conditions are met
- Capability to automate collection of data for indicators
- Risk calculators
- Export capabilities to desktop tools like Word, Excel, Acrobat.
- Work flow and collaboration
- Robust change management features with field level tracking of changes

- In-line surveys and facilitated workshops
- Real time integration across multiple ERP and other electronic systems.
- Informative dashboards and drill down information as well as desktop gadgets
